IN LOVING MEMORY

Master Sgt. (Res.) Ido Aviv י"ט

19 Oct 1995 – 28 Apr 2024 · Fell in battle in Gaza, age 28

Overview

The admin manages the whole system: creating sites, lockers and items, managing users, and granting permissions. An admin can also act as a **site manager** (for all sites) and as a **user** by switching to the matching tab – **Dashboard**, **Manager Functions**, and **Soldier Functions**.

The admin dashboard, grouped into User, Inventory, and Site & Locker management.

Sites, Lockers & Items

Build the inventory hierarchy: a site contains lockers, and each locker contains item cells.

1 Create a site

On the dashboard, click **Create Site**. Fill in every field, and click the exact site location on the map. When done, click **Create Site** — a success message confirms it was created.

The screenshot shows the 'Add New Site' form in the 'Soldiers Surf For Free' application. The form is titled 'Add New Site' and has a 'Back to Dashboard' link. It contains the following fields:

- Site Name:** A text input field with the placeholder 'your-site-name'.
- City:** A text input field with the placeholder 'your-site-city'.
- Site Location (Click on map to set):** A map showing a coastal area with a blue pin indicating the selected location. Below the map, the coordinates 'Selected: 32.085300, 34.781800' are displayed.
- Contact Name:** A text input field with the placeholder 'your-contact-name'.
- Contact Phone:** A text input field with the placeholder 'your-contact-phone'.
- Contact Email:** A text input field with the placeholder 'your-contact-email'.

A 'Create Site' button is located at the bottom of the form.

Fill the fields and drop the pin on the map to set the location.

2 Add a locker

Prerequisite: a site must already exist — the locker is associated with it. Click **Add Locker**, choose the site, then fill the required fields: **Cell Count** (1–8) and **Public Label**. You may optionally dedicate the locker to a fallen soldier.

Click **Create Locker**. On success, the new **locker ID** is shown — copy it, then click **I Have Copied the ID** to return to the dashboard.

Note: setting up the locker also requires configuring its microprocessor (covered in a separate guide). Complete this step first and copy the ID — you'll hardcode it into the locker firmware.

The screenshot shows the 'Add New Locker' form within the 'Soldiers Surf For Free' admin dashboard. The dashboard header includes the title 'Soldiers Surf For Free' and navigation links for 'Dashboard', 'Manager Functions', and 'Soldier Functions'. A notification banner at the top states '19 Oct 1995 - 28 Apr 2024 · Fell in battle in Gaza, age 28' with a 'See more' link. The form itself is titled 'Add New Locker' and contains the following fields: 'Site' (a dropdown menu with 'dolev site (givatatim)' selected), 'Cell Count' (a text input with '8'), and 'Public Label' (a text input with 'your-locker-public-label'). Below these is an optional section 'In Memory of a Fallen Soldier (optional)' with a note: 'Each locker can be dedicated to a soldier. The name will appear above the locker; clicking it opens the link.' This section includes fields for 'Soldier Name', 'Memorial Link', and 'Short Description' (with a 0/500 character count). A 'Create Locker' button is at the bottom of the form.

The Add New Locker form, including the optional memorial dedication.

The screenshot shows a confirmation screen titled 'Locker Created Successfully'. It contains the text: 'Important: You must hardcode the following ID into the ESP microprocessor firmware:'. Below this, the ID 'ID: 7' is displayed in large, bold font. A message follows: 'Please write this down or update the firmware now before continuing.' At the bottom right, there is a button labeled 'I Have Copied the ID'.

Copy the generated ID before continuing.

3 Add an item

Prerequisite: a locker must already exist. Click **Add Item**, select the site, then select a locker and expand its cells. Choose the cell that will hold the item, fill the item fields, and click **Create Item**. On success you're returned to the dashboard.

Note: the chosen cell number must match the cell number defined in the locker's microprocessor. The **RFID Code** is the code burned to the item's RFID chip, used to identify it when scanned at the locker's RFID reader.

The screenshot shows a web application titled "Soldiers Surf For Free". At the top, there are navigation links: "Dashboard", "Manager Functions", and "Soldier Functions". Below the navigation bar, there is a "Back to Select Site" link. The main heading is "Select Locker & Cell for New Item". A modal window titled "guide locker (ID: 8)" is open, displaying a list of cells from "Cell 1" to "Cell 8". Each cell has an "Available" button next to it.

Select the locker and the exact cell for the new item.

The screenshot shows the same web application. At the top, there is a memorial banner for "Master Sgt. (Res.) Ido Aviv" with his dates of birth and death, and a "See more" button. Below the banner, there is a "Back to Selection" link. The main heading is "Add New Item". The form contains several fields: "RFID Code *" (required), "Condition" (a dropdown menu currently set to "new"), "Description", "Type ID" (with a value of "1" and a note "1=Surfboard, etc."), and "Manufacturer". A "Create Item" button is at the bottom of the form.

Fill the item fields, including the RFID Code.

Managing Users

Temporarily or permanently restrict access, and restore it when appropriate.

1 Ban a user

Click **Ban User**, find the user, and click **Ban** in their row. Choose a duration (24 Hours, 3 Days, 1 Week, 1 Month, or Permanent) and state a reason, then click **Confirm Ban**. The user can't access the system for the chosen period.

Note: a new ban overrides any existing ban on that user.

The screenshot shows the 'Soldiers Surf For Free' admin interface. At the top, there's a navigation bar with 'Dashboard', 'Manager Functions', and 'Soldier Functions'. Below this, a memorial card for 'Master Sgt. (Res.) Ido Aviv' is visible. A 'Back to User List' link is present. The main focus is a 'Ban User #2' modal dialog. This dialog contains a message: 'This action will prevent the user from logging in and borrowing items.' It has a 'Duration' dropdown menu set to '24 Hours' and a 'Reason for Ban*' text area containing 'late return'. At the bottom of the dialog are 'Cancel' and 'Confirm Ban' buttons.

Set the ban duration and reason, then confirm.

2 Unban a user

Click **Unban User** and select the user to unban. A window with the ban details appears – click **Confirm Unban**. The user can then use the system normally.

Unban User

Are you sure you want to unban this user?

Ban Details:

Reason: late return

Start Date: 6/8/2026, 5:41:55 PM

End Date: 6/9/2026, 5:41:55 PM

Banned By: User #1

Cancel Confirm Unban

Review the ban details, then confirm the unban.

Deleting Resources

Remove a site, locker, or item from the system.

1 Delete a site, locker, or item

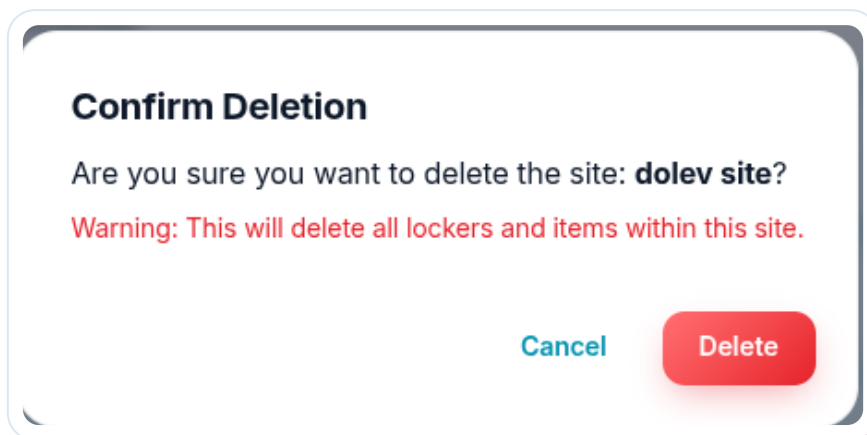

Warning: deletion is **irreversible** — deleted resources cannot be restored. Deleting a resource also **cascade-deletes** everything under it (a site's lockers and items; a locker's items).

Click **Delete Resources**, then:

- To delete a **site**, click its **Delete Site** button.
- To delete a **locker**, expand its site and click **Delete Locker**.
- To delete an **item**, expand its site and locker and click the item's bin icon.

You'll be prompted to confirm — click **Delete** to permanently remove the resource and everything under it.

Note: deleting a locker does not affect its physical hardware. To reuse that hardware, create a new locker and reconfigure it with the new ID.

The deletion confirmation prompt.

Admin & Site-Manager Permissions

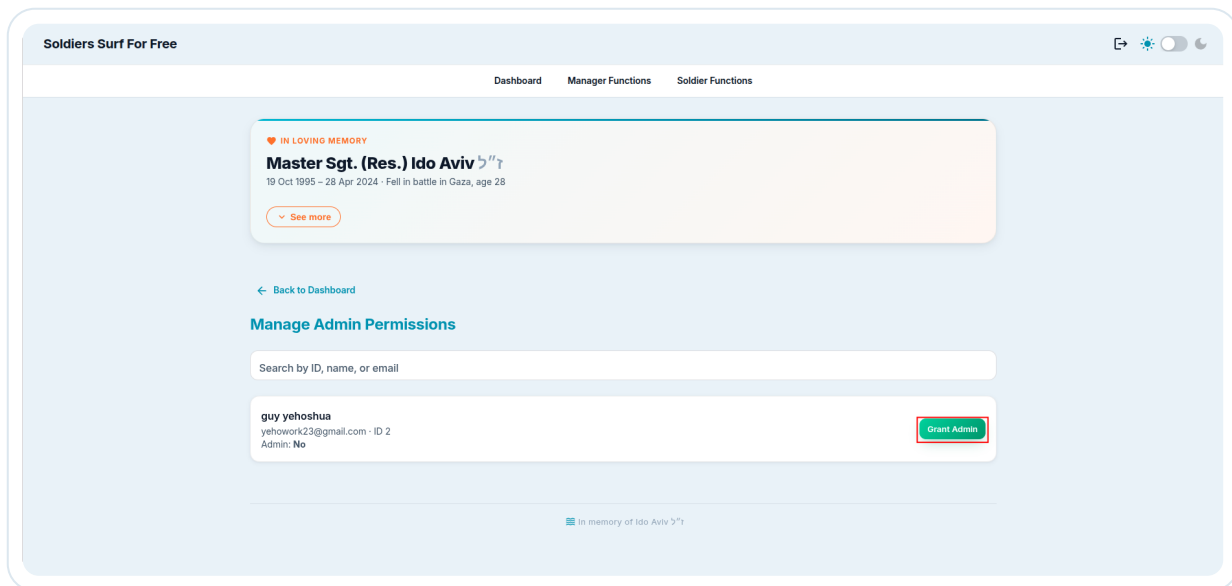

Grant or revoke elevated permissions for existing users.

Permissions can only be granted to **existing** users, and they form a tree:

- There is one root **System-Admin** whose permissions cannot be revoked.
- When admin **A** grants permissions to user **B**, A becomes B's parent in the tree.
- Admin **A** can revoke **B**'s permissions only if B is a descendant of A.
- Revoking a user's permissions cascade-revokes all of their descendants too.

1 Grant admin permissions

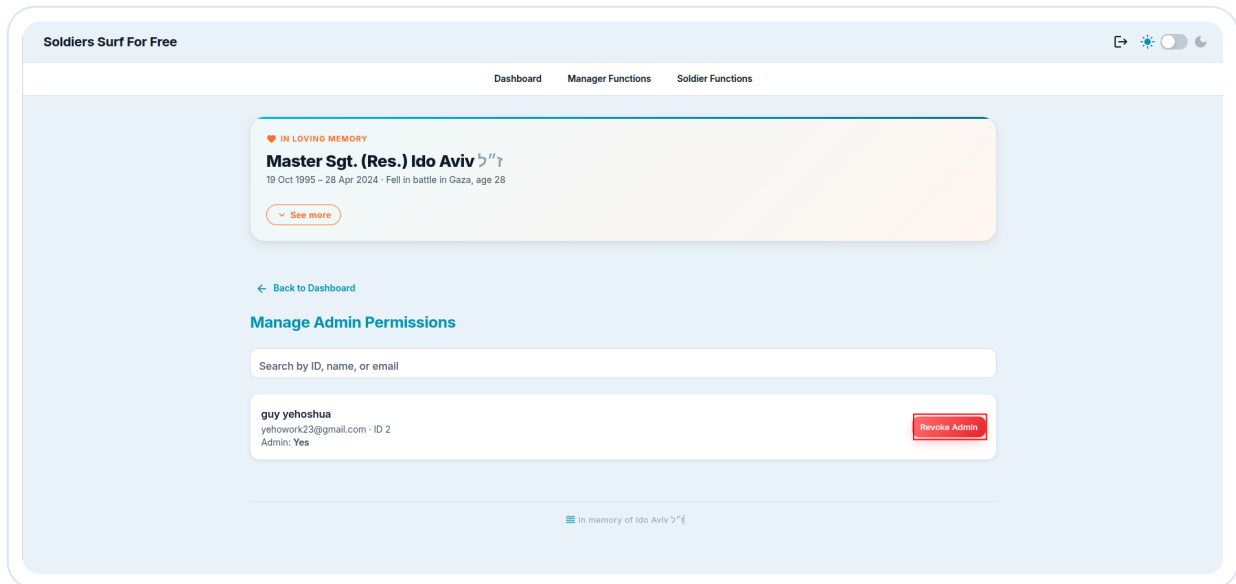

Click **Manage Admin Permissions**, find the user, and click **Grant Admin**. The user is granted admin permissions.

Grant admin permissions to an existing user.

2 Revoke admin permissions

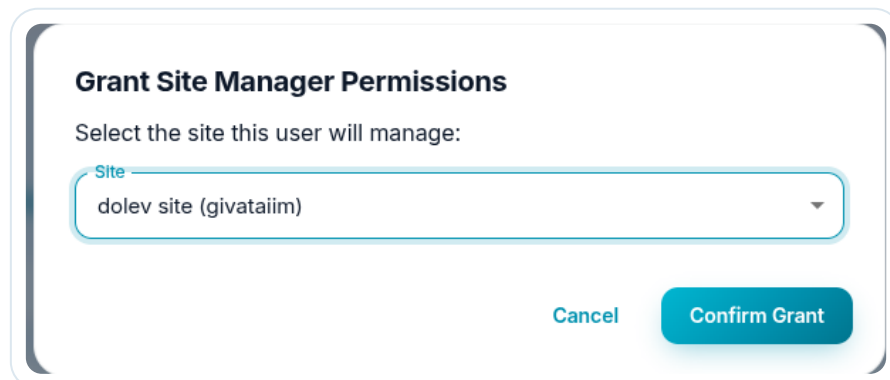

Click **Manage Admin Permissions**, find the user, and click **Revoke Admin**. The user's admin permissions are removed.

Revoke admin permissions from a user you granted.

3 Grant site-manager permissions

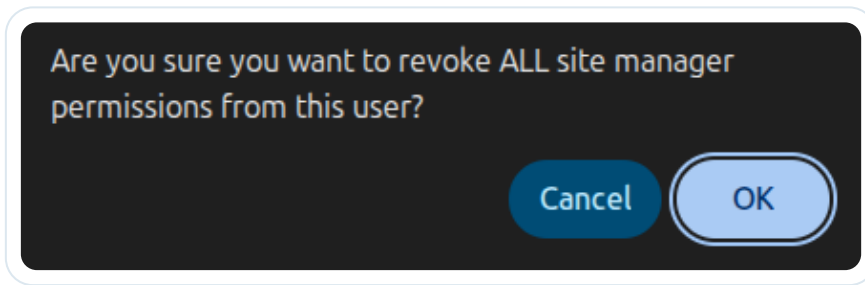

Click **Manage Site Manager Permissions**, find the user, and click **Add Site**. Choose a site and click **Confirm Grant**. Repeat to grant additional sites to the same user.

Pick the site this user will manage, then confirm.

4 Revoke site-manager permissions

Click **Manage Site Manager Permissions**, find the user, and click **Revoke All Sites**. Confirm with **OK** — all of the user's site-manager permissions are revoked.

Confirm to revoke all of the user's site-manager permissions.
