Overview

A site manager controls specific sites assigned by an admin. You can send **Reset** and **Unlock Cell** commands to lockers, view a site overview, and update site policy. Site managers **cannot** edit resources in their sites — only an admin can do that.

PART 1

Sending Commands to a Locker

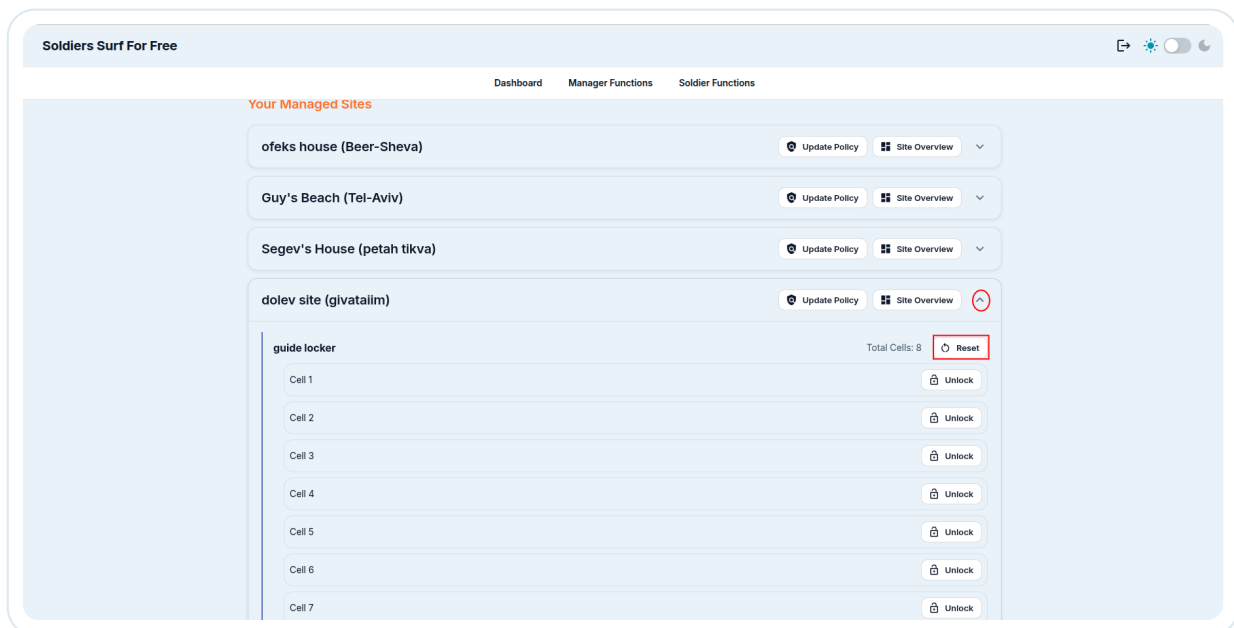

Two commands are available: Reset the microprocessor, or Unlock a specific cell.

You can send two commands to a locker: **Reset** (a software reset of the locker's microprocessor) and **Unlock Cell** (unlock a specific cell's door lock).

Note: to receive a command, the locker's microprocessor must be configured, powered, and connected to the internet (Wi-Fi). If any requirement isn't met when you send the command, it won't be executed.

1 Reset a locker

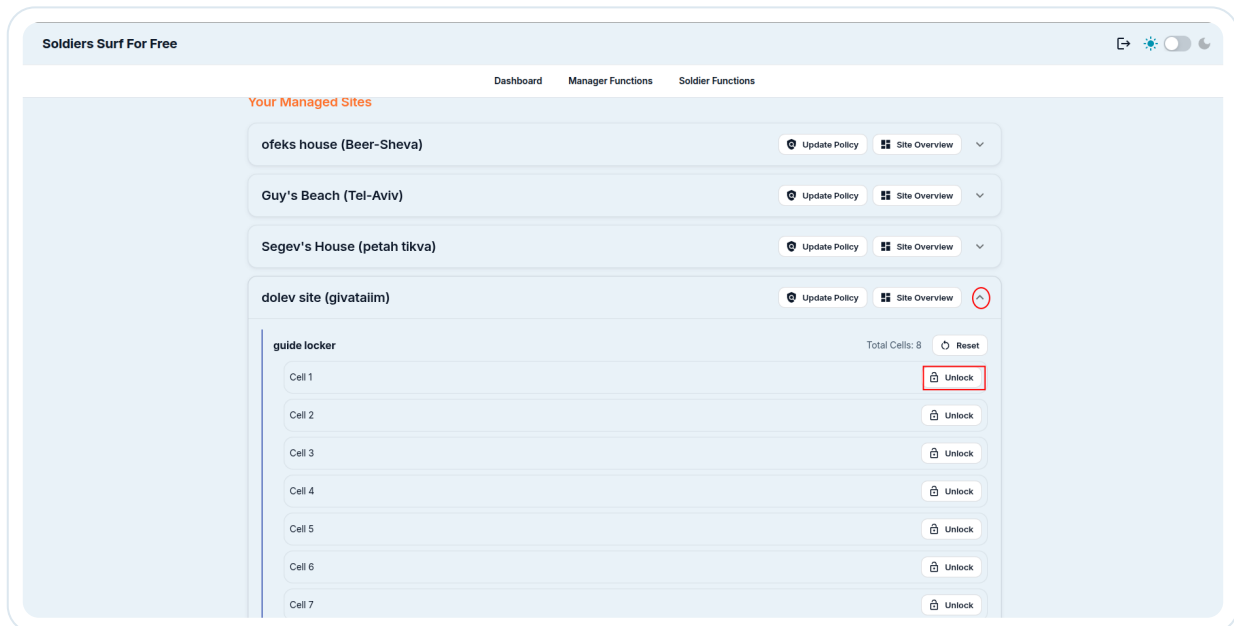

In **Manager Functions**, expand a site, choose a locker, and click its **Reset** button. A reset command is sent and a success message appears.

Expand a site and reset the chosen locker.

2 Unlock a cell

In **Manager Functions**, expand a site, choose a locker, choose a cell, and click its **Unlock** button. An unlock command is sent and a success message appears.

Pick the specific cell and send the unlock command.

Updating Site Policy

Tune reservation limits, unlock distance, grace period, and walk-in access per site.

1 Update a site's policy

In **Manager Functions**, choose a site and click **Update Policy**. Fill or modify the fields you want to change, then click **Save Policy**.

Policy fields include reservation duration and daily/weekly/yearly limits, max unlock distance (meters), max active reservations and daily rentals per user, the reservation grace period, and an **Allow Walk-in Without Reservation** toggle.

☒ Allow Walk-in Without Reservation

Cancel Save Policy

The site policy form — adjust the fields, then save.

Site Overview

Monitor reservations, handle reported malfunctions, and read user reviews.

1 View reservations

Open **Site Overview** for a site. The **Reservations (Calendar)** tab shows bookings in daily, weekly, or monthly view.

Site Overview — dolev site

5	6	7	8	9	10	11

Close

Reservations calendar, switchable between month / week / day.

2 Handle malfunctions

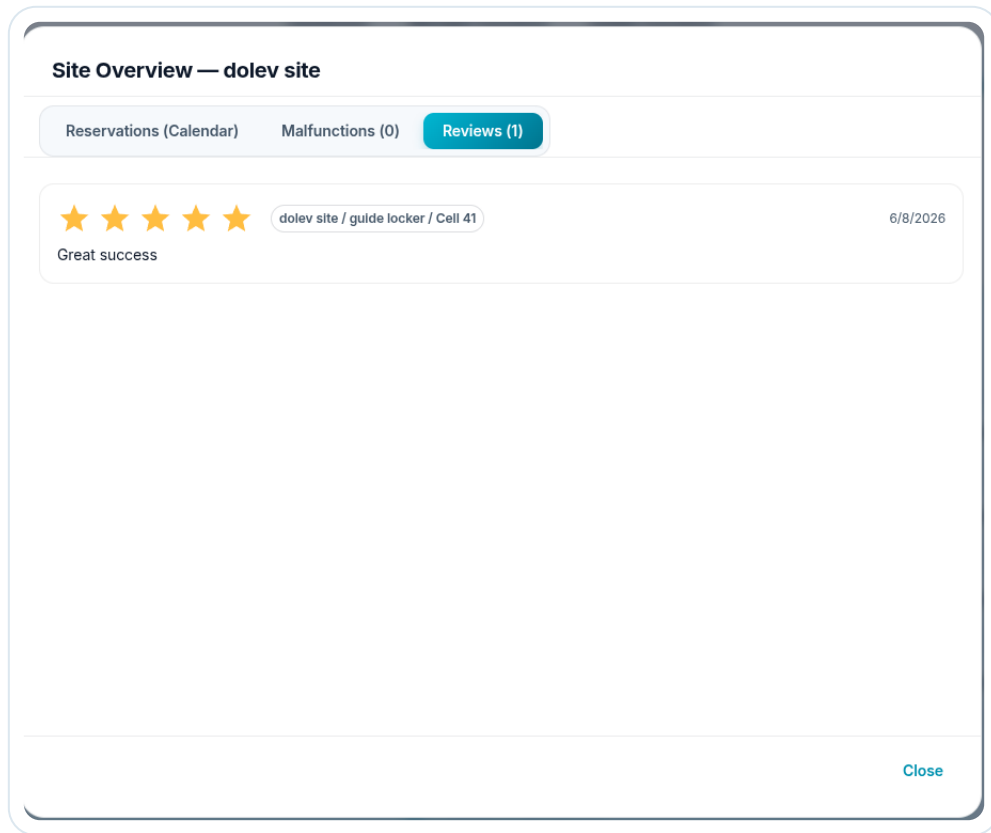

The **Malfunctions** tab lists issues reported by users. You can mark a malfunction as **Resolve** or **Block** usage of the affected equipment – blocked equipment is unblocked again by resolving the malfunction.

Open malfunctions, with Block and Resolve actions.

3 Read site reviews

The **Reviews** tab shows feedback users left for equipment at your site, with star ratings and comments.

User reviews for the site's equipment.
